

# Week 2 Assignment

---

## Overview

For this assignment, you will be using the AngularJS framework combined with Local Storage to create an Employee Directory Application.

---

## Rubric

<b>25 Points</b>	Implements the required AngularJS directives: ng-app, ng-repeat, ng-model, etc.
<b>25 Points</b>	Data Service is implemented, abstracting the save/remove functionality to a dedicated object
<b>25 Points</b>	User can add and remove items from the list, and these changes persist between refreshes (Local Storage)
<b>10 Points</b>	Application is now Named and Created as a module, and ng-app references this name.
<b>15 Points</b>	Application is Professionally Styled
